Experiment No 7

Aim : Validating RESTful APIs using Postman
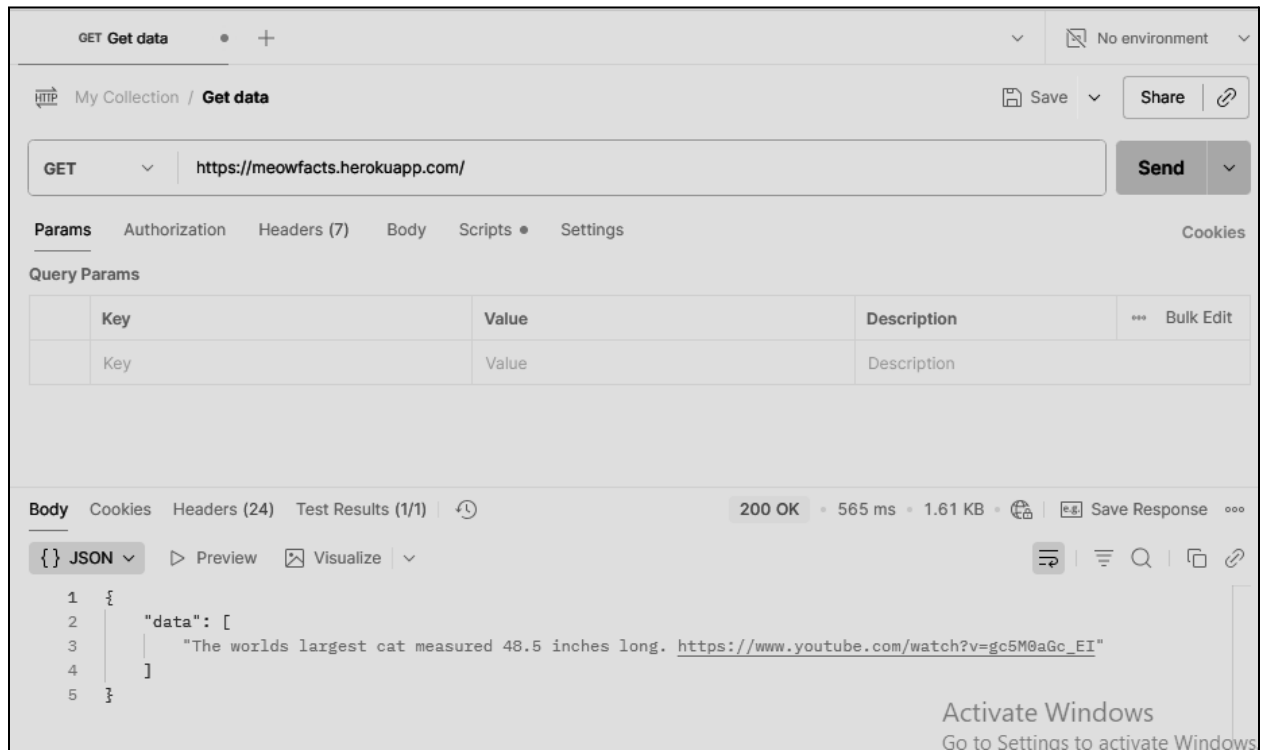

Outputs :

GET :

Figure 7.1 - Using GET request to grab information from a cat API

Figure 7.2 - Using the count key to get multiple GET requests and responses

Figure 7.3 - GET request to get the users from a public API by reqres.in

POST :

Figure 7.4 - POST request to create a new account in reqres

Conclusion : Thus we have understood the use of the postman API for the api testing , it provides us multi case testing with just a single click and thus is a very useful tool for all the software backend developers.
